Mikael Rinne

Founding Engineer · Rust, C#, TypeScript

PROFILE

Founding engineer who builds developer tools and real-time systems in **Rust, C# and TypeScript**. Top contributor to **Ivy Framework** (437 GitHub stars) and lead engineer of **Ivy Tendril**, a development environment for teams where AI agents write most of the code. Founder of **SpaceCorps**, which ships a space MMO on its own Rust engine and maintains 20+ open-source Rust CLIs for AI agents. Started in computational physics and machine learning, with a first-author IEEE paper written with CERN collaborators.

EXPERIENCE

Ivy Interactive · 1st Founding Engineer — 2025 – present · Stockholm

A .NET AI startup: a pure-C# full-stack framework for internal tools with LLM code generation, and Tendril, an agentic development environment.

- Top contributor to **Ivy Framework** (C#/.NET, 437 stars): **3,586 commits and 1,148 PRs**, 38% of the repository's history.
- Lead engineer of **Ivy Tendril** since its first commit in April 2026 (204 stars; macOS, Windows, Linux): **2,128 commits and 652 PRs**, 48% of the repository. Agents run in parallel in isolated git worktrees and changes are reviewed and merged in-app. Now leading the V2 rewrite as a TypeScript and Rust monorepo.
- Wrote much of the Rust layer: Rusty-Framework (pure-Rust port of Ivy), Ivy.NativeJsonDiff (RFC 6902 diffing over Rust FFI for reactive UI updates), Ivy.Docs.Compiler, Tendril-Service (headless agent orchestration service and CLI), and co-built Rustino (native webview windows, a Photino.NET replacement).
- Own product engineering, AI modelling and planning, and lead a team of developers. Across the company's GitHub organisation: **2,700+ PRs authored and 600+ reviewed**.
- Speaker at the Agentics Foundation "Harness Engineering" meetup (IBM Innovation Studio) as maintainer of Ivy Tendril; author of the talk "Three things that nearly killed our software factory".

SpaceCorps Technology OÜ · Founder & CEO / CTO — 2023 – present · Remote, Europe

- Founded the company around an open-source 3D MMO; recruited and lead an international team of six (designers and full-stack developers). Built the original WebGL prototype, SpaceCorps 2 (TypeScript, three.js), myself.
- Built **Space3d**, an in-house game engine in Rust on wgpu/WebGPU targeting native, web and mobile, and **SpaceCorps 2027** on top of it: a space MMO with public builds for Windows, macOS and Linux (latest build v0.4.27).
- Published **20+ MIT-licensed Rust CLIs** that give AI agents safe access to real services (Gmail that can only draft, Cloudflare, Firecrawl, Exa, Sliplane, Namecheap and more): structured output, stable exit codes, OS-keychain credentials and prompt-injection guards. Co-built with Niels Bosma.
- Open-sourced open-apple-models and open-android-models (Swift, Kotlin; pre-release): tool calling for on-device LLMs (Apple Foundation Models, Gemini Nano) to drive game NPCs.

Scania · Solutions Architect — 2024 – 2025 · Stockholm

- Developed new modules for Scania's internal core platform, with a focus on stability, user experience and CI/CD workflows.
- Contributed to the move to a newer front-end stack (Angular 19).

Nixor EE AS · Full-stack Software Engineer — 2023 – 2024 · Tallinn

- Built and shipped SaaS and POS improvements for Coop, Stockmann Group and Selver, using custom Odoo modules and payment integrations.
- Found and fixed critical transaction bugs in production retail systems across Estonia.

University of Tartu, Institute of Technology · Software Engineer & Researcher — 2022 – 2023 · Tartu

- Built scientific web software for molecular dynamics and quantum emission calculations with CERN collaborators (GETELEC, 174 commits), bridging theoretical and experimental physics.
- First author of "An Online Tool for Thermal-Field Emission Calculations from Metal and Semiconducting Emitters", IEEE IVNC 2023.

Private tutor, natural sciences 2019 – 2024 · Tallinn, remote

- Taught natural sciences one-on-one, in groups and remotely, helping students improve their academic results. Mentoring is still central to how I run a team.

EDUCATION & HONORS

SALT School of Applied Technology 2024
Full-stack C# developer programme: TDD, mob programming, ASP.NET, Blazor, EF Core, React.

University of Tartu, Chemistry 2019 – 2024
Studied chemistry with a heavy computational and data science focus: ML models for molecular dynamics (Gaussian approximations, Monte Carlo, neural networks, gradient boosting) and simulation in COMSOL, Modelica and Fortran.

Bronze medal, 51st International Chemistry Olympiad 2019

1st place, Estonian National Chemistry Olympiad 2018

Google: Foundations of Data Science, Python 2024

SKILLS

Languages	Rust, C#, TypeScript, Go, Python, SQL; also Swift, Kotlin, C/C++, Java, Fortran, WGSL
Backend & cloud	.NET 10, ASP.NET Core, EF Core, SignalR, axum, Tokio, PostgreSQL, Docker, Kubernetes, AWS, Azure, GCP, GitHub Actions
Frontend & graphics	React, Vite, Tailwind, TanStack, three.js/WebGL, wgpu/WebGPU
AI engineering	Agent orchestration, tool calling, MCP, Anthropic and OpenAI APIs, RAG and vector search, on-device models, evals
Also used	Angular, Node.js, Dapper, Odoo, SQL Server, MySQL, xUnit, Vitest, Jest, Jira, Confluence, COMSOL, Modelica, MATLAB, Assembler
Practice	TDD, SOLID, agile, CI/CD, code review, mob programming, technical leadership, hiring and mentoring
Human languages	English (native), Estonian (fluent), Russian (fluent)
